

Planned manufacture of a 250mm diameter x 500mm long cylinder made from a fine woven stainless steel wire quite open, similar to open flyscreen. It is hinged in two with quick release clasps for quick and easy emptying. Set up on a spindle shaft, driven like a rotisserie with a variable speed windscreen wiper motor. The ends supported on steel supports. The ends of the cylinder are also made of the same fine stainless woven wire, which will allow viewing of the roasting beans.
